SECTION 5: Firefighting measures

General Fire Hazards: Use standard firefighting procedures and consider the hazards of other

involved materials. Prevent runoff from fire control or dilution from entering

streams, sewers, or drinking water supply.

5.1 Extinguishing media Suitable extinguishing

media:

All standard extinguishing agents are suitable.

Unsuitable extinguishing

media:

Do not use water jet as an extinguisher, as this will spread the fire.

5.2 Special hazards arising from the substance or

mixture:

In case of fire, carbon monoxide and carbon dioxide may be formed. Use

water spray to keep fire-exposed containers cool.

5.3 Advice for firefighters

Special fire fighting procedures:

Keep away from sources of ignition - No smoking. Static discharge: material can accumulate static charges which may cause an incendiary electrical

discharge.

Special protective

equipment for fire-fighters:

Wear self-contained breathing apparatus and protective clothing. Use water

spray to keep fire-exposed containers cool.

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures:

Use personal protective equipment. Wash skin thoroughly with soap and water. Keep container tightly closed and in a well-ventilated place. See Section 8 of the SDS for Personal Protective Equipment. Avoid contact with

skin and eyes.

6.2 Environmental Precautions: Do not allow runoff to sewer, waterway or ground.

6.3 Methods and material for containment and cleaning up:

Shovel up and place in a container for salvage or disposal. Caution:

Contaminated surfaces may be slippery.

6.4 Reference to other sections:

Prevent runoff from entering drains, sewers, or streams. Caution:

Contaminated surfaces may be slippery.

and very Bioaccumulative (vPvB) Octamethylcyclotetrasiloxane (D4) meets the current EU REACh Annex XIII criteria for PBT and vPvB and has been added to the candidate list for Substances of very high concern (SVHC)., However our understanding of the available science is that D4 does not behave

similarly to known PBT/vPvB substances. The silicones industries interpretation of the available data is that the weight of scientific evidence from field studies shows that D4 is not biomagnifying in aquatic and terrestrial food webs. D4 in air will degrade by naturally occurring reactions in the atmosphere. Any D4 in air that does not degrade by these reactions is not expected to deposit from the air to water,

to land, or to living organisms.
