

Fastfixer™ Applications

Fastfixers™ can be used in a large variety of different markets and applications. They provide you with a quick to use, costs-effective, instant adhesive fastener.

To get the best results from your Fastfixers™ we recommend they are used in a warm, dust free, dry environment with the ambient temperature being between 10°C - 25°C. To ensure a good bond – apply firm hand pressure once the dot has been applied to the surface. Rolls should be stored in their original packaging and away from sources of extreme heat, light and sun.
